This document provides step-by-step instructions for installing a private instance of Eureka Streams from Lockheed Martin. Eureka Streams combines social features to enable employees within your company or organization to collaborate in new ways. Eureka Streams provides features that bring multiple, disparate sources of content into manageable streams.

DRAFT

Executive Summary

This chapter provides a high-level overview of the project.

1.1. Scope

This document provides detailed instructions for installing Eureka Streams on Fedora Linux. The instructions probably relate closely to the steps needed to install on other distributions, such as Red Hat Enterprise Linux and Centos.

Installing Fedora Linux is well-documented and is beyond the scope of this document.

1.2. Technologies used

This project incorporates the following technologies:

- Fedora Linux 11
- Eureka Streams
- Memcached
- Java
- Maven
- Postgres

1.3. Challenges and Risks

stub text

1.4. Recommendations

stub text

1.5. Reviewers

Name	Title	Email
Jane Austen	Technical Writer	*jane.austen@example.com*[1]
Compliance Person	Senior Auditor	*compliance.person@example.com*[2]
Another Name	Project Manager	*another.name@redhat.com*[3]
Yet Another	Technical Account Manager	*yet.another@redhat.com*[4]

1.6. Approvers

Name	Title	Email
John Doe	Director of Systems Engineering	*john.doe@example.com*[5]

DRAFT

Technical Overview

This section provides a high-level technical discussion about the packaging and deployment of Eureka Streams.

DRAFT

Runbook Procedures

3.1. Installation

This installation is based on the instructions at *http://www.eurekastreams.org/build-and-run/*.

3.1.1. Install prerequisite packages

These steps install numerous dependencies.

Note

These steps use **`sudo`** to run commands as **`root`**. You could also run **`sudo -i`** to become **`root`**.

1. Install **`maven2`**

```
sudo yum -y install maven2 maven2-manual
```

2. Install **`memcached`**

```
sudo yum -y install memcached
sudo /sbin/service memcached start
sudo /sbin/chkconfig memcached on
```

3. Install Git

```
sudo yum -y install git-all
```

4. Install Postgres client and server

```
sudo yum -y install postgresql postgresql-server
```

5. Install Java from *http://www.java.com/en*

B.2. Documentation tools

This document is available in Asciidoc source. Building the document requires three tools:

- *Asciidoc* provides a lightweight markup syntax and a command-line tool to convert source content into Docbook format. The Asciidoc package is available in the standard Fedora **`yum`** repositories.
- *Publican* provides tools to convert Docbook source into publication-quality PDF and HTML formats. Publican is available in the standard Fedora **`yum`** repositories.
- *Engagement-Journal* provides a command-line tool (**`ej`**), attempting to simplify document creation using Asciidoc and Publican. **`ej`** automatically creates a buildable, template document and places the document under Git version control. Engagement-Journal is available from Github at the URL listed below.
